PT TUNAS DIELEKTRIKA NUSANTARA was established in August 2010 to meet the growing demand for electrical tools and instruments in Indonesia.

We provide electrical consultation and high-quality products from trusted principals, supported by excellent customer service.

With a professional and dedicated team, we have grown into a trusted distributor in Indonesia. We believe that hard work, loyalty, and reliability are the keys to building strong customer relationships and achieving longterm success in the Indonesian market.

Megger®
S1-568/2

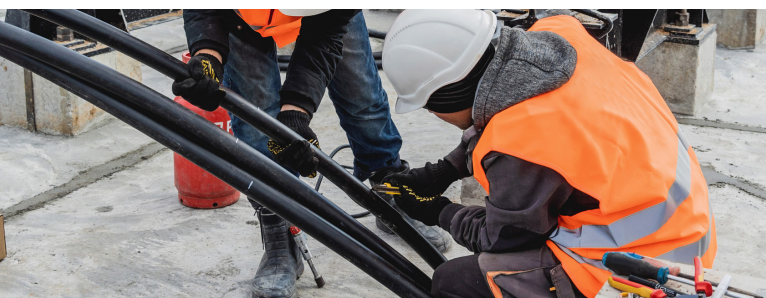

Cable fault location, testing, and diagnostics

Find cable faults fast and maintain secure network operation

Megger's cable testing and fault location solutions help you quickly identify faults other devices may miss, whether caused by damage, installation issues, or deterioration. Reduce downtime, lower costs, and maintain the security of your supply.

Portable fault location system

The STX40 is the most powerful and most modern portable fault location system in the market.

STX40

High power test and diagnosis combination for MV cables

TDM 45 series is a revolutionary break-through in testing and diagnosis of MV cables.

TDM45

VLF sine wave test system for medium voltage cables

The VLF Sine 62 kV, with integrated tan delta, is a compact, robust, and portable high-performance VLF sine wave test system for medium voltage cables.

VLF Sine 62 kV

High-power test and diagnostic system for MV cables

The VLF Sine 37 kV with integrated tan delta is a compact, durable, and highly portable test and diagnostic system designed for medium-voltage (MV) cable networks.

VLF Sine 37 kV

Circuit breaker analysers

Quickly assess circuit breaker condition and performance with Megger's purpose-built analysers. Run essential tests, uncover hidden issues, and ensure reliable, standards-compliant operation across every stage—from commissioning to maintenance.

Circuit breaker analyser

The EGIL200 circuit breaker analyser drawing experience from successful Megger™ series of circuit breaker analysers.

EGIL200

Trip Coil Tester

B10E provides a ripple-free variable DC voltage that can easily accommodate a high, variable load.

B10E

Primary current injection test system

Simplify all types of switchgear and current transformer commissioning, circuit breaker testing, and more. The system consists of a control unit and a current unit. The two parts are portable, and INGVAR can be quickly assembled and connected.

INGVAR

Smart primary injection test system

A high current primary injection test system for all forms of high current testing required in a substation, including testing self-powered reclosers, circuit breakers, high speed fuses, and ground fault relays.

SPI500

Megger®

Electrical insulation testing solutions

From handheld testers to high voltage diagnostic units, our insulation testing range covers every application. We help you identify deterioration early, preventing costly downtime and ensuring your electrical infrastructure operates at peak performance.

The Megger range of 5, 10 and 15 kV insulation testers are known worldwide for their rugged dependability, long service life and accurate, reliable measurements.

12 kV Insulation diagnostic system designed for condition assessment of electrical insulation in high voltage apparatus.

Portable high voltage test sets for DC testing cables and electrical equipment available in four versions (50, 80, 110, and 120 kV), the HV Test Set series have a modular design, consisting of an operation unit and HV unit easy to set up.

IDAX Insulation diagnostic analyser based on HV DFR
State-of-the-art, high voltage DFR instrument tailored for field testing of power transformers, bushings and more.

Low resistance testing solutions

Measuring low resistance is essential for preventing overheating, energy loss, and equipment failure in electrical systems. Whether you're validating circuit breaker contacts, checking busbar joints, confirming cable bonding integrity, or ensuring rail safety, Megger low-resistance testers, including low resistance ohmmeters, provide fast and accurate results. Our DLRO and MOM instruments use true four-terminal Kelvin measurement to eliminate errors from test leads and contact resistance. Designed for substation, rail, industrial, and manufacturing environments, they deliver stable readings even in high-noise. With the addition of CertSuite Asset, you can store, trend, analyse, and report results with confidence—supporting proactive maintenance and reliable asset performance.

Digital low resistance micro-ohmmeters
Perform high current low resistance testing in almost any location, even if there is no access to a mains supply

The DLRO2X 2 A Low resistance ohmmeter is a handheld instrument designed to give you fast, accurate, repeatable measurements, even in electrically noisy locations.

Digital low resistance ohmmeters
The heavy duty DLRO10HD and DLRO10HDX can deliver a 10 A current into circuits up to 250 mΩ and 1 A into circuits up to 2.5 Ω.

Handheld micro-ohmmeter
The MOM3 handheld 300 A micro-ohmmeter is purpose-built for measuring the resistance of critical electrical components such as circuit breaker contacts, busbar joints, and other high-current links.

Test and maintain **electric vehicle** charging points

Our testing solutions help you ensure electric vehicle charge points are installed correctly, operate safely, and function efficiently. We have a solution for testing every part of the electric vehicle charge point life cycle from installation to maintenance.

Multi-function tester for low voltage electrical installations.

Tester for installation, maintenance and fault diagnostics of low voltage installations, including EV charge points and domestic photo-voltaic systems.

MFT-X1

Electric vehicle charger checker

The new EVCC300 introduces a new and convenient way of checking electric vehicle (EV) charge points.

EVCC300

Electric vehicle charge-point adaptor

Compact, easy-to-use adapter designed to perform all the functions required by the electrical contractor to fully test Mode 3 AC Electric Vehicle Charge-points.

EVCA210

Grid monitoring and instrument transformer **test solutions**

Safety, resilience and reliability are critical for electrical grids. That's where Megger comes in. Utilities operators, distribution system operators (DSOs) and transmission system operators (TSOs) around the world rely on Megger's extensive industry experience and comprehensive solution offerings.

Smart Grid medium voltage sensors for overhead line networks (4 to 140 kV)

Giving you unprecedented visibility of your distribution grids through the accurate identification of high impedance faults and predictive analytics.

MS5000

A medium voltage sensor with 0.5 % current and voltage measurement accuracy

The MS5200 is an on-line wireless system for medium voltage overhead lines, providing on-line information about faults and grid operations.

MS5200

Megger®

Low voltage installation testing solutions

When the world's leading electrical experts need the tools to get the job done right, they go with Megger. That's because as the industry experts, our low voltage installation testing solutions are engineered to help you meet the demands of the job — safely, efficiently, and accurately. You can trust our in-depth knowledge and top-of-the-line products to empower your decision-making.

CAT IV insulation testers

Have been designed for use in an exceptionally wide range of applications including electrical installations, cable testing, motor testing, automotive, ESD, panel building, avionics and maintenance.

MIT400/2

Portable fault location systems for LV networks

This series has the most portable fault location systems specifically for shielded and unshielded low voltage power cables.

EZ-THUMP 3 - 4 kV

Hazardous area AC voltage detector designed to be used to check for the presence of AC voltage, indicated by a bright red LED situated within the white nylon tip, an audible sounder, and a vibration alert.

VF6 EX

Power clamp meter

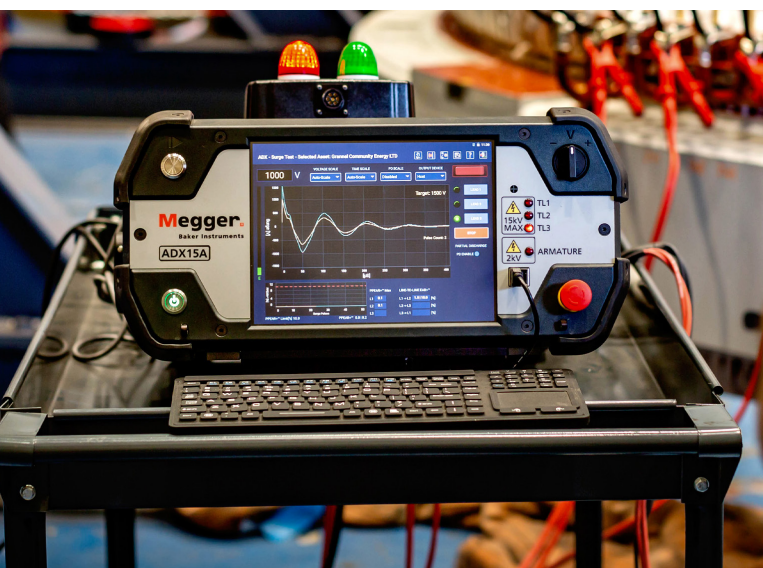

The new Megger DPM1000 power clamp meter combines the functionality of power meter, harmonics meter and data logger in one easy-to-use package.

DPM1000

Motor and generator testing solutions

Rotating machinery is the heart of your operation. From static to dynamic testing, our solutions detect faults in motors and generators early. We help you extend asset life, reduce unplanned downtime, and maintain operational efficiency.

Automated diagnostic test equipment

The Megger Baker ADX is an innovative and transformational leap forward for motor testing in today's demanding workplaces.

ADX

Rotating machine tester

dedicated Static Motor Tester with Megger's tried and trusted suite of insulation resistance tests (IR), plus all the great traditional features and reliability of Megger's testers.

MTR105/105X

Partial discharge testing and monitoring

Partial discharge (PD) is one of the earliest signs of an emerging fault in electrical systems. Accurately identifying the signs of PD gives you the best chance of mitigating problems before they occur — and the best chance comes from our advanced PD monitoring and measurement solutions through the use of partial discharge meters and analyzer.

Professional Acoustic Imaging

Camera designed for fast, accurate detection of ultrasonic sound sources across industrial environments.

MPAC208

On-line PD handheld scanner

Detecting defects in medium and high voltage systems (MV and HV).

PD Scan

Digital Partial Discharge test and measurement device

Compact multi-channel digital PD measuring device for medium voltage and high voltage insulation assessment, offering reliability, precision, and flexibility.

ICMneo

Portable partial discharge monitoring system

Monitors your asset for a required period without interrupting your daily business

ICMmonitor Portable

Protection relay testing and diagnostic solutions

Verify that your protection relays operate correctly when faults occur. Megger's smart relay testing solutions and expert support help you validate protection performance, improve system reliability, and ensure continuity of power across your network.

Relay and substation test system

The SVERKER 900 relay and substation test system is the engineer's ultimate testbox that addresses the increasing need for three-phase testing capability in electrical distribution substations, renewable power generation stations and industrial applications.

SVERKER900

High current, high power multi-phase relay test system

SMRT46R multipurpose, lightweight, field portable test set capable of testing various electromechanical, solid-state and microprocessor-based protective relays, motor overload relays, and similar protective devices.

SMRT46R

Multi-function Measurement Instrument

Ideal instrument for use in general electrical systems maintenance, electrical machine repairs, protective relay testing or in monitoring power at the electrical service entrance.

PMM-2

MRCT Relay, CT, VT & CVT test

A lightweight, robust, portable unit used to perform demagnetisation, ratio, saturation, winding resistance, polarity, phase deviation, and insulation tests on current transformers.

MRCT

Transformer testing and monitoring solutions

Comprehensive transformer monitoring that unites real-time DGA fault detection with advanced partial discharge testing. Gain continuous insight, diagnose insulation issues early, and ensure safer, more reliable transformer performance.

True three-phase transformer winding analyser

Streamlines transformer testing with a one-time connection for all tests, reducing reliance on multiple instruments and minimising testing time, helping you maximise productivity for fast and accurate maintenance decisions.

TAU3

Fully automatic insulating oil dielectric breakdown testers

Are a range of automatic oil test sets that perform accurate dielectric breakdown voltage tests on mineral, ester, and silicone insulating liquids.

OTS PB and OTS AF

On-line dissolved gas analyser (DGA) for incipient and critical fault detection

The InsuLogix® G2 acetylene, hydrogen, and moisture monitor combines early detection of incipient faults with critical fault detection in power transformers by measuring the presence of two key gases, hydrogen and acetylene, as well as moisture.

Insulogix G2

Multifunction transformer and substation test system

The software includes several apps, making it fast and easy to perform a large range of different tests. The hardware, range of cables and accessories offers unmatched flexibility, making the TRAX an efficient and time-saving system.

TRAX

Handheld, battery-operated transformer turns ratiometer

In addition to routine polarity validation and turns ratio tests, the TTRU1 can measure short-circuit impedance (leakage reactance) with the same one-time connection.

TTRU1

Sweep Frequency Response Analysers

The FRAX200 sweep frequency response analysers (SFRA) are the smallest and most rugged instruments of their type and powerful tools for revealing potential electrical and mechanical problems in power transformers, many of which are difficult or impossible to detect using other methods.

FRAX200

True 3 phase transformer turns ratiometer

The NEW Megger TTRU3 transformer turns ratiometer uses a revolutionary design to perform a complete series of measurements on a transformer, including 3Ø step up turns ratio testing.

TTRU3

FLUKE®

Stay Ahead of **Unplanned** Downtime

Fast, easy, early detection of compressed gas leaks, partial discharge, and mechanical anomalies, all of which can be completed during normal operating hours over a large area quickly.

Fluke ii500

Fluke ii905

Fluke ii915

Fluke iSee ii01

FLUKE®

Fluke 1663 Multifunction Installation Tester is the ideal choice for hard working professionals.

1663

The Fluke 87V Industrial Multimeter provides the resolution and accuracy to efficiently troubleshoot motor drives, plant automation, power distribution, and electromechanical equipment - even in loud, high-energy, and high-altitude locations.

87V

Automatic pressure calibrator
The Fluke 729 Automatic Pressure Calibrator has been designed specifically to simplify the pressure calibration process and provide faster, more accurate test results.

729 PRO

320 mm Diameter Split Core Transformer Used as a Selective clamp for ground loop resistance measurement around power pylons. Inner diameter of the clamp is 320 mm (12.6 in). Includes the split core transformer. This Split Core Transformer can be used in conjunction with the 1625 Kit or the 1623 Kit.

EI-162BN

Earth ground tester
The Fluke 1625-2 earth ground tester measures earth ground loop resistances using only clamps, only stakes, or one clamp and stakes.

1625-2

Earth ground clamp

The 1630-2 clamp measures earth-ground loop resistances for multi-grounded systems using the dual-clamp jaw. This test technique eliminates the dangerous and time-consuming activity of disconnecting parallel grounds, as well as the process of finding suitable locations for auxiliary test stakes.

1630-2

Pocket thermal camera

The Fluke Pocket Thermal Camera puts the power to minimize downtime in everyone's hands.

PTi120

Three-phase power quality analyzers

Fluke 1770 Series Three-Phase Power Quality Analyzers eliminate the complexities of power quality logging, troubleshooting, and analysis.

1777

Expand your measurement range with increased flexibility. Measure around awkward sized conductors with the Fluke 376 True RMS Clamp Meter

376

Milliamp process clamp meter

The Fluke 773 milliamp clamp meter is accurate, versatile, and highly portable. It saves time and money by measuring 4–20 mA signals five times faster than with traditional multimeters, and without breaking the loop.

773

Thermal Imagers

It comes with a smart intuitive user interface, increased thermal sensitivity to capture the smallest differences and the latest technology for on-screen clarity.

Ti480U

Fluke 500 series battery analyzer

Fluke Battery Analyzers allow you to quickly and easily define upper and lower measurement thresholds or tolerance ranges. During the testing process, measured values are automatically compared to the predefined threshold levels producing a PASS, FAIL or WARN indication after each measurement.

Mobile thermal camera

With the Fluke iSee™ Mobile Thermal Camera - TC01A, the temperature can be measured and thermal imaging detection can be carried out anytime and anywhere through the Type C interface of a smartphone.

The Fluke GFL-1500 Solar Ground Fault Locator is a frontline troubleshooting tool that helps technicians quickly pinpoint active ground faults in solar photovoltaic (PV) systems.

The PVA-1500 series with high precision testing equipment, you can reliably assess the health and performance of solar modules and arrays, making informed decisions to enhance their output and longevity.

The Fluke FEV500 Fast DC EV Charging Station Analyzer is a portable, field-ready tool designed to simplify testing, validation, and documentation of Fast DC chargers. Combining safety, performance, and interoperability checks in one device, it allows technicians to perform comprehensive diagnostics without the need for an electric vehicle on-site.

BT521

Whether you work on motors, generators, cables, or switchgear, the Fluke 1587 Insulation Multimeters are ideally suited to help you with your tasks and at a cost that is far less than buying the two products. Provides maximum versatility for both troubleshooting and preventative maintenance

1587

The rugged Fluke 831 has an intuitive guided user interface that enables quick and complete shaft alignment without advanced training or complicated programs. And while it's easy to use, laser alignment with the Fluke 831 is powerful enough for the skilled technician.

831

GFL-1500

The Fluke 931 tachometer is a handheld tachometer that integrates the contact and non-contact speed measurement functions and can accurately measure the revolutions per minute (RPM) or surface speed and distance.

931

PVA-1500 Series

FEV500

Accelerates every step of the copper certification process

The DSX CableAnalyzer Series copper cable certifiers enables testing and certification of twisted pair cabling for up to 40 Gigabit Ethernet deployments and will handle any cabling system whether it is a Cat 5e, 6, 6A, 8 or Class FA and I/II.

DSX-8000

Insulating protective cover-up

Protective cover with circular conductive fitting, installation is in contact with conductors up to Ø 25mm

RIGID COVER
26.4kV

Cover for pin insulator, designed to protect the energized conductor next to the pin or pillar insulator.

PIN INSULATOR
COVER 26.4kV

Used to temporarily protect crossheads in overhead networks (phase/phase).

PROTECTIVE COVER FOR
CROSSARMS 36.6kV

Used to temporarily protect the knife switch housing in overhead networks with a maximum voltage of 36.6kV (phase/phase)

PROTECTIVE COVER FOR
KNIFE SWITCH 36.6kV

Protective cover for knife switches, used for temporary protection of fuse or knife switches in overhead networks, and can be installed by contact or remotely.

PROTECTIVE COVER
FOR KNIFE KEY

Test and detection instruments

The voltage detector with electrode only signals the presence of voltage when its electrode comes into contact with the network.

VOLTAGE DETECTOR
WITH ELECTRODE

Instruments for checking the presence of voltage in conductive elements, in alternating current.

APPROACH VOLTAGE
DETECTORS

Designed to identify the presence of voltage in energized systems.

MULTI-PURPOSE
VOLTAGE DETECTORS

The SE-TF Phase Tester has been designed for phase-phase and phase-ground voltage measurements on electrical transmission and distribution circuits.

SE-TF PHASE TESTER

Used to verify the insulation condition of insulating elements such as rods, operating poles, scaffolding, and ladders; **it cannot be used as a test for issuing reports.**

INSULATING ROD
TESTER

MULTI

Let's Create
New Concepts of
Instruments

Made in  Japan

No need to clamp on the overhead distribution line; Max 25th order Harmonics current measurement using app; Resistant to drop impact.

HCL-36UX

Ac leakage current, 400mA/4A/40A/300A True rms reading, 40mm ϕ CT Harmonics Current and Voltage

HWT-301

This Product can be used not only by itself, but also simultaneously connected with other different product groups.

MCV-36X1

Can measure and record line current & power flow direction of overhead distribution lines.

MHR-600

Ac leakage current measuring instrument for use in overhead low voltage service lines.

M-340LX

Leakage current clamp tester for low voltage

M-1141XR

Flexible leakage current tester (CE)

RLM-10+

Next-generation leakage current clamp meter with connection, via Bluetooth, to a smartphone which displays waveforms and data.

MCL-800DXR

Next clamp-type grounding resistance tester that can connect to a smartphone via Bluetooth and save data on an our cloud server.

MET-10X

Insulation Resistance/Induced Voltage Tester for High Voltage

MA-70B

AC/DC Leakage Current Measurements

M-730

Original CT opening and closing structure

TCM-45E

Cable Identification Solutions

Develop innovative solutions to the current and future needs of the electricity distribution sector.

LV network topology

merytronic has designed the new ge-neration of Phase and Feeder identifiers ILF G2 and ILF G2 Pro, which can identify 3 phases and up to 12 feeders of a transformer output.

ILFG2 | G2 PRO

Low Voltage Network Monitoring & Fraud Detection Portable Device

A complete portable data logger for Advanced Monitoring of Low Voltage networks.

LV DNA

Underground cable and pipe locator

Locate Underground Power Cables and Pipes quickly and accurately. Energized and de-energized MT and LV Cables.

MRT-700

MV and LV cable identifier

The ARIADNA CI enables electrical cables to be identified, energised or not, between a set of conductors in places such as: manholes, ditches, enclosures, etc.

Ariadna CI

Identification of De-energised cable

The cable identifier Ariadna CI-DE device allows to identify of any type of de-energized cable, in a RELIABLE, SIMPLE, and SAFE way.

Ariadna CI-DE

Merytronic PI-3 MV & LV cable identifier

helps users to easily identify any de-energized electric cable and its phases, among multiple conductors, in substations, trenches, manholes, panels, aerial/underground conversions, etc.

Merytronic PI-3

CAT IV - 50/60 Hz
PH-PH: 220-480 V ~
I max.: 0.35-0.4 A
Only usable fuses:
Ø 6.3 x 32 mm: 4A - 500 V
1.5 kA - T

Our Strength

Reliability

We service major clientele from the public and private sector. We are the authorised service centre for global brands (e.g. Megger - U.K). We have 90% success rate for all repairs.

Lead Time / Warranty

Quotation ready at your disposal within a week. We offer a standard 90 days service warranty. Extended warranty is available upon request.

Wide Coverage

We repair all brands and models: Megger, ISA, Baker, detnet, Lenze, BK Precision, KKS, SebaKMT, Phenix, HVI, Seaward, Vanguard, Doble, Hipotonics, etc.

Availability

Express service available (Subject to parts availability) On-site services including trouble-shooting & repair after office hours.

We provide rental of industrial electrical test equipment, for the purposes of:

Circuit Breaker Analyzer System, Insulation Resistance Tester, Cable Fault Locator, Portable Fault Location, CT/PT Analyzer, High Voltage Bridge, Hipot Tester, Cable Tracer, Multifunction Transformer and Substation, Relay Test Unit, Automatic Oil Test Set, Earth Tester, Relay Test System, Primary Current Injection Test Set, etc. (#page 18–19)

Our engineers can help you perform testing and troubleshooting on industrial electrical equipment easily and accurately. Please contact us for your industrial electrical test equipment rental needs.
